# The Metaguise™ Experience

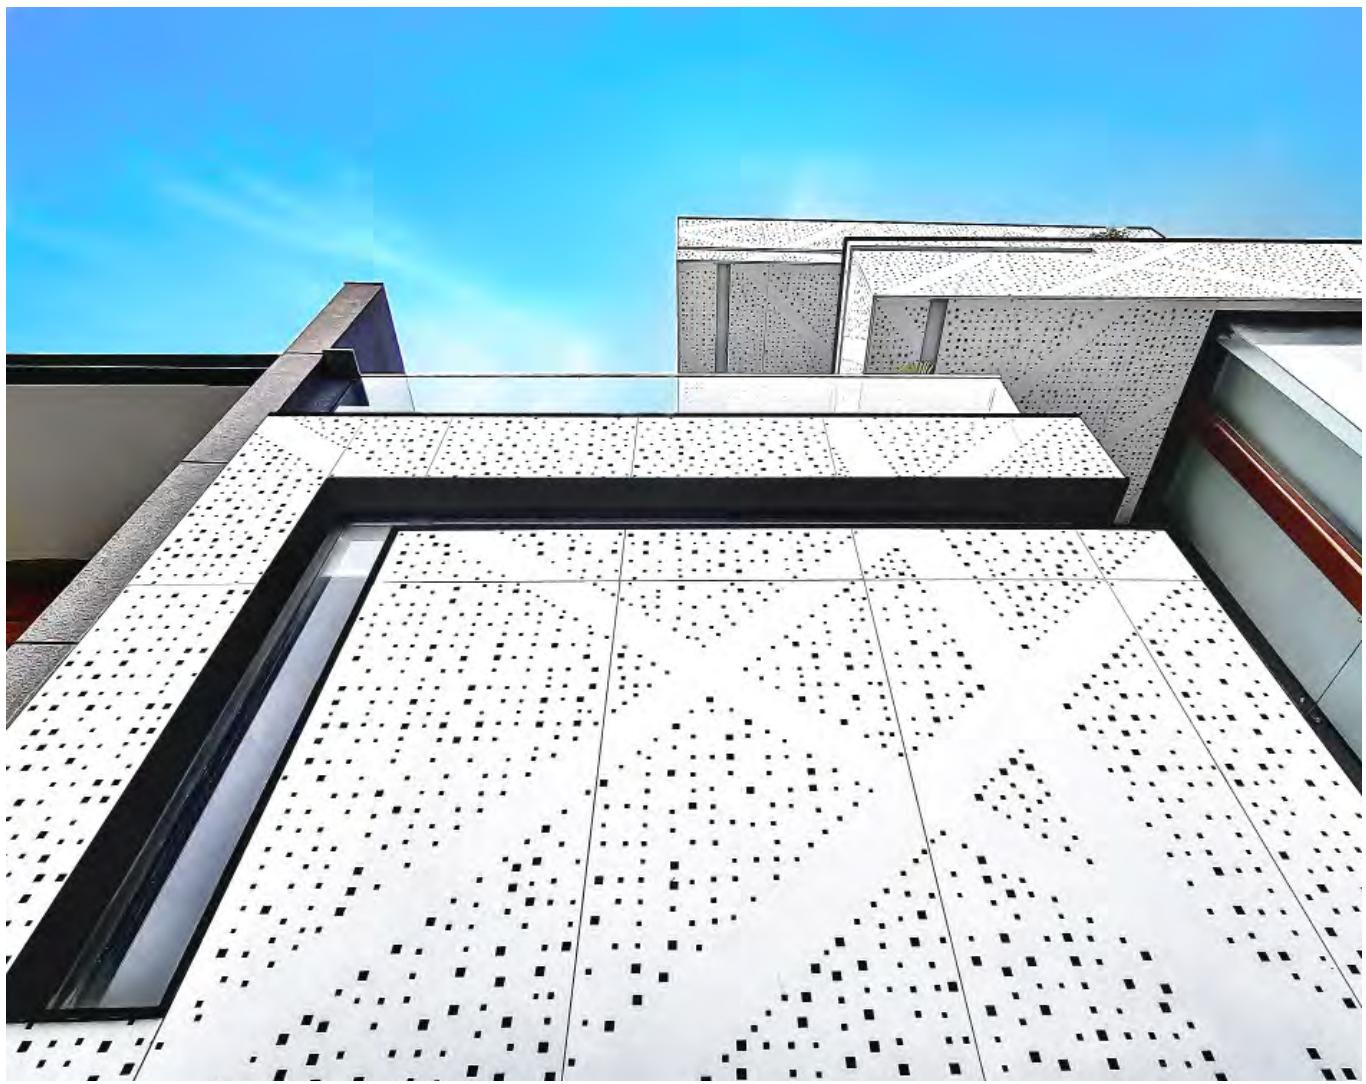

The Metaguise™ engine runs on Trust, Transparency and Technical Expertise. We follow a thorough 47 step process to provide a hassle free experience to our clients, with meticulous services and workmanship.

Our process includes:

- Civil assessment at site
- Facade Consultation at site till completion
- Drawings for the metal facade intersection with concrete, stone and other surfaces of the building
- Turn key installation
- 24 hour after sales service in Delhi/NCR

Our products, developed in aluminium and other metals are engineered to perfection; retaining an accuracy of upto 3 mm.

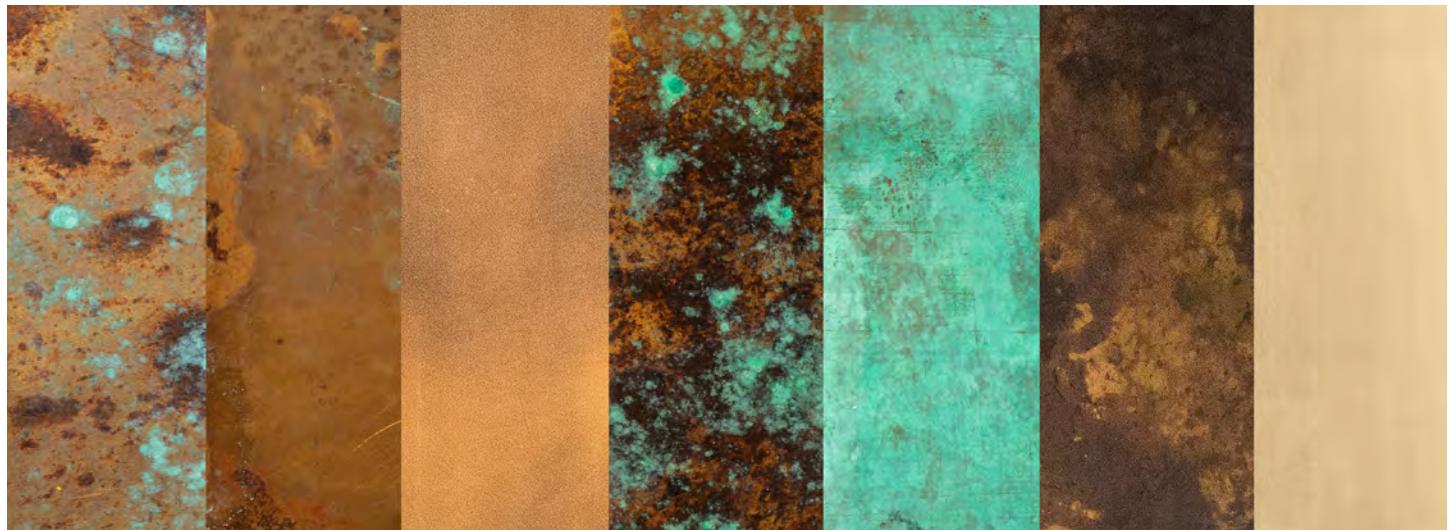

Designed in Solidworks, Rhino, Grasshopper and AutoCAD the facades are uniquely customised for every building. In addition to the extensive variety of forms, we also build kinetic and parametric structures.

Our products come in an astounding variety of VOC free surface finishes that include textures like wood, corten steel, concrete and many more.

The surface coatings come with exterior certification and warranty of 15 to 35 years \*

Our products are engineered to uphold high safety standards, certified by testing labs in the toughest of conditions for static load, wind resistance , joineries, coatings and finishes

We ensure Safety,  
Quality, Discipline and Productivity, during installation at site.

Our extensive inhouse team of engineers and designers ensure the highest quality product design and development.

Retaining the rustic romanticism of naturally weathered steel, MetaCorten effortlessly dodges the pitfalls of using Corten for exterior cladding and facades. It is water and weather resistant, thus stain-free as opposed to its contemporary counterpart. The surface of MetaCorten is homogenous and the texture evenly distributed. In addition, it is maintenance free with a warranty of 20 years, making it a hassle-free modern alternative for architectural applications.

The reddish brown tones of MetaCorten add a striking abstract element to the building. A feast for the eyes, the Corten Sublimation at MetaLab™ renders it rust and bleed-free, making it a sustainable and environment friendly solution for modern architecture.

MetaWood is the modern time's ultra sustainable alternative to wood. The introduction of metal in buildings goes beyond the fundamental, ingrained in the composition, it provides buyers with an option to reduce short-sighted consumption and invest in a product that appreciates in value over time. Metals like aluminium are light weight, customisable and easy to install, making it a more cost-effective option over wood.

The speckles of earthy brown give MetaWood the bonafide look without carrying the pitfalls of natural wood. All-weather resistant, non-corrosive and termite-proof, it derives worth of the product as it is environmentally compatible.

Metal structures are also fire and stain resistant, can be easily cleaned and require no upkeep. While wood generally needs replacement, metallic structures offer the flexibility of easy repairs through patch fabrication, thereby outperforming wood in all weather conditions.

MetaCopper, processed at MetaLab™, combines beautifully with both traditional and contemporary architectural styles. The copper-toned breathable perforated matrix cassette brings life to the building, creating a warm and inviting tone that enhances the flow of light throughout the space.

It elevates the vibrance of the facade, with its rustic ochre-red hues. The copper toned perforated MetaCassette enhances the clean minimal design of the building.

MetaLab™ accelerates the natural Patination process, producing MetaPatina with verdigris tint for strikingly beautiful interior wall panelling in customised designs. The anti-microbial properties of Pure Copper/ Brass Alloy prevent the spread and mutation of covid-19 making it the perfect choice for our Living Spaces.

The vibrant blue accents of MetaPatina balanced with the radiance and warmth of copper to add a hint of flamboyance to a space. Specially handcrafted in MetaLab™ this wall sculpture creates a palatial ambience.
